

LED Lighting Project Financing Options Now Available Through Emium Lighting Partner

PRESS RELEASE **UPDATED: AUG 31, 2017 15:00 CDT**

New partnership opens the door to positive cash flow scenarios for many companies desiring to retrofit their existing facilities with quality energy saving LED lighting while conserving working capital.

ROLLING MEADOWS, Ill., August 31, 2017 (Newswire.com) - Emium Lighting has recently partnered with LEAF

Commercial Capital with the goal of helping companies improve their facility lighting while maintaining a favorable cash flow position stemming from the monthly energy cost savings that LED lighting can deliver.

In many cases the reduction in monthly energy costs that switching from traditional light sources to LED technology provides can exceed the cost to finance such an investment. LEAF Commercial Capital Inc. can help tailor a solution to help companies overcome the financial hurdles associated with funding such an improvement. The Emium/LEAF partnership offers companies a path to a superior quality of light, reduced energy and maintenance costs, while also conserving their working capital.

Why Businesses Nationwide Finance With LEAF

- 100% financing, including hardware, installation, taxes, and more
- No money down
- Deferred, step, and seasonal payment plans
- One-page applications and simple, clear agreements
- Outstanding service and support, every time

It is hard to beat the benefits of LED lighting: lower utility costs, higher property values, more productive employees, and happier customers. In addition to these benefits, with a little research, many companies will also discover that they qualify for incentives and tax benefits for such upgrades that can add even more to their bottom line.
